ABSTRACT OF THE DISCLOSURE

5   A system and method for efficient control and capture of dynamic database content for rapidly providing a user with a highly relevant collection of documents related to a query. The system and method for efficient control and capture of dynamic database content includes a computer system with a storage means for

10   facilitating the retention and recall of dynamic database content and a communications means for facilitating bi-directional communication of the computer system with local or distributed networks; an executory module operationally coupled to the computer system for controlling the storage means and the

15   communications means as well as directing the system for the efficient control and capture of dynamic database content to a plurality of pre-selected Internet sites; and a capture module which is in communication with the executory module and facilitates selection of the plurality of Internet sites associated with a query

20   submitted by a user of the system.
